# 266,185

Tonnes of waste collected from households between April 2023 and March 2024.

# 13%

Reduction in non-recyclable waste over the last seven years (despite a growing population).

# 96+%

Of all the waste and recycling handled by SLWP between April 2023 and March 2024 was treated at facilities within the UK.

# Introduction

**The South London Waste Partnership (SLWP) is a voluntary partnership between the London boroughs of Croydon, Kingston, Merton and Sutton. Established in 2003, the SLWP is responsible for transporting, sorting and processing all the recycling and waste generated by one million residents living in the four boroughs.**

The SLWP boroughs have made good progress in recent years in reducing waste volumes, maximising recycling and reducing carbon emissions associated with recycling and waste management. A big part of this is down to the commitment and dedication of residents, who

are increasingly trying to minimise the amount of waste they produce in the first place and then diligently sorting any waste they do create ready for it to be recycled.

In return for those efforts, it is of paramount importance that residents have complete trust and confidence that the recycling they sort out at home is handled with care and is *actually* recycled whenever possible. It is also important that residents trust that anything that cannot be recycled or has not been sorted for recycling is disposed of in the best and most environmentally sustainable way possible.

That's why this report is so important. Published on an annual basis, it will provide complete transparency on where waste comes from, where it goes and what happens to it; right down to the last tonne. This first edition focuses on the waste generated between April 2023 and March 2024. We hope you find it informative and reassuring.

For more details about the work of the SLWP, visit [www.slwp.org.uk](http://www.slwp.org.uk)

# 99.98%

The proportion of waste handled by the SLWP that was either recycled, composted or sent for energy recovery. Just 0.02% ended up in landfill.

# 41%

The average recycling rate across the four SLWP boroughs (well above the London average of 33%).

# 76%

The proportion of residents who would like to know more about where their recycling and waste is taken and what happens to it.

# Where the waste came from

Between April 2023 and March 2024, the SLWP handled a total of 362,626 tonnes of recycling and waste on behalf of the four partner boroughs.

Around three-quarters (266,185 tonnes) was collected from the 400,000 households across the SLWP region. 13 percent (45,899) was received at the six Household Reuse and Recycling Centres

(HRRCs), nine percent (31,882) was collected from public streets and parks (including fly tips) and the rest (18,660 tonnes) was collected from local businesses (note this only accounts for businesses who choose to use Veolia’s SLWP Commercial Waste Collection Service). The graphs on these pages provide a detailed breakdown of where the waste came from, for the SLWP as a whole and then split by each of the four boroughs: Croydon, Kingston, Merton and Sutton.

## SLWP total - tonnes (2023/24)

### Croydon - tonnes (2023/24)

### Kingston - tonnes (2023/24)

### Merton - tonnes (2023/24)

### Sutton - tonnes (2023/24)

# Where the waste went

Our objective is to always treat waste as high up the 'waste hierarchy' as possible.

In 2023/24, 41% of the household waste we handled was recycled or composted and 59% was sent for incineration with energy recovery. A tiny amount (less than 0.02%) was sent to landfill and none was sent for incineration without energy recovery.

We also try to treat waste as close to home as possible, to reduce carbon emissions associated with transport. In 2023/24, more than 96% of the waste and recycling we handled was treated at facilities within the UK.

## The Waste Hierarchy

# The facilities we use to treat waste

We use a range of specialist facilities to store, sort, process, treat and dispose of the waste we collect.

## Waste transfer stations

Waste Transfer Stations are large covered storage areas where waste and recycling is delivered by the collection vehicles that visit your home every week. When the collection vehicles arrive, they are weighed before they tip their load.

The different types of waste and recycling are kept apart in separate storage bays. After tipping, the collection vehicles can get back to their rounds. The waste and recycling is collected by large HGVs ready for transport on to the next stage in the journey.

Waste Transfer Stations are important in improving the efficiency and reducing the carbon footprint of the collection service. During 2023/24, the SLWP made use of waste transfer stations in Mitcham (Merton), Morden (Merton), Coomber Way (Croydon), West Croydon and Villiers Road (Kingston).

## Re-processors

Re-processors are companies that take recyclable materials from the Materials Recovery Facilities and make them into new products. During 2023/24 more than 100 different re-processors received recycling that was collected from homes across the SLWP region - see page 16 for details.

## Materials Recovery Facilities

A Materials Recovery facility or 'MRF' (pronounced 'murf') is a specialist facility where mixed recycling is sorted by machine and by hand into single material streams. These can then be sold to re-processors who turn the recyclable materials into new items.

When it arrives at a MRF, the recycling is weighed and quality checked. It's then fed onto loading conveyors by mechanical shovel. The mixed recycling is sorted using a series of rotating screens, magnets, eddy current and optical scanners to separate out the plastics, glass, cans and cartons. Once the machines have done a rough sort, human 'pickers' take over to ensure the different materials have been properly sorted. The sorted recycling is then bailed (squashed into cubes) and sold to re-processors.

During 2023/24, the SLWP sent most of its recycling to MRFs in Rainham (East London), Wolverhampton and Avonmouth (near Bristol).

## Paper mills

Most of the paper and card we collect from homes has already been sorted into a separate bin by residents so it doesn't need to go to a MRF. Instead, it can go straight from the Waste Transfer Station to a specialist paper mill, where it is treated and turned into new paper-based products (paper and card collected from flats in Croydon, Merton and Sutton is mixed with other recycling so it has to go to a MRF first).

In 2023/24, the SLWP sent most of its paper and card recycling to a specialist facility in Kemsley, Kent, operated by DS Smith (pictured below), the largest paper mill for recycled papers in the UK.

## Anaerobic Digestion plants

Anaerobic Digestion (AD) plants are where food waste is taken for treatment. They can often be spotted by their distinctive green-domed digester tanks.

These facilities digest the food waste in an anaerobic (without air) environment which produces two useful products. The first is a nutrient-rich liquid bio-fertiliser which is used by UK farmers to help grow the fruit and vegetables that end up back on our plates. The second (which may surprise you) is biogas: The gasses produced during the digestion process (which takes about 75 days) are captured and used to drive a turbine which generates electricity. The electricity is fed into the National Grid.

During 2023/24 the SLWP sent food waste to AD plants in Mitcham (Merton), Surrey and Buckinghamshire.

## Composting facilities

Any garden waste collected from households across the SLWP region or brought to one of the six Household Reuse and Recycling Centres ends up at a composting facility.

Here the green waste is shredded and composted over a six month period to produce peat free, high quality compost. The CO<sub>2</sub> levels are checked daily and the temperature is kept below 65°C so you get a living product filled with good bacteria and fungi – perfect for improving soil. Unlike anaerobic digestion plants, these facilities allow the green waste to naturally decompose in the presence of air.

During 2023/24 the SLWP sent most of its garden waste to a composting facility in Hampshire.

## Landfill sites

Landfill sites are large holes in the ground (often disused quarries) where waste that cannot be recycled is buried. They have been widely used across the UK since the late nineteenth century as a safe and convenient way of disposing of non-recyclable waste. Between the late 1990s and 2020, the SLWP disposed of its non-recyclable waste at the Beddington Landfill Site in Sutton (pictured below).

We now recognise how harmful landfill sites are to the environment (biodegradable waste lets off methane, a powerful greenhouse gas, as it decomposes underground). As a result, the use of landfill sites is becoming less common. In 2020 the Beddington landfill site closed and now the vast majority of the SLWP's non-recyclable waste is treated at the Beddington Energy Recovery Facility (see next page).

We only send small amounts of waste to landfill if the Energy Recovery Facility is closed for maintenance and there are no other, more sustainable options, available to us.

## Household Reuse and Recycling Centres (HRRCs)

Household Reuse and Recycling Centres (HRRCs) allow residents to recycle and responsibly dispose of a wide range of materials that are not included in the kerbside collection service, including: rigid plastics (toys, garden furniture, buckets, bins etc.), scrap metal, wood, engine and cooking oil, car and household batteries.

There are six HRRCs managed by the SLWP on behalf of the four partner boroughs: Villiers Road (Kingston), Garth Road (Merton), Kimpton Park Way (Sutton), Factory Lane (Croydon), Fishers Farm (Croydon) and Purley Oaks (Croydon).

## Energy Recovery Facilities (ERF)

Energy Recovery Facilities (ERFs) are the modern replacement for landfill sites. ERFs burn waste that either cannot be recycled or has not been separated for recycling at very high temperatures in strictly controlled conditions. This super-heats water in special boilers which produces steam and drives a turbine to generate electricity – and lots of it: ERFs generate about 3% of all the electricity used in the UK. Many ERFs (including the one used by the SLWP at Beddington) also recycle the ash and the metals that are left at the end of the treatment process, and some provide low-carbon heating and hot water to nearby homes and businesses via insulated pipes.

In 2023/24 the SLWP sent most of its non-recyclable waste to the Beddington ERF in Sutton (pictured), which produces enough electricity to power itself plus 60,000 homes.

# THE WASTE JOURNEY - CROYDON

**The journey starts here:**  
Around 2,500 tonnes of recycling and rubbish is collected from Croydon households every week by a fleet of collection vehicles.

The **food waste** is turned into a liquid bio-fertiliser which is used by UK farmers to help grow their crops. The gasses produced are captured and used to drive a turbine which generates electricity and is fed into the National Grid.

**Food waste** is taken by the collection vehicles directly to an anaerobic digestion (AD) facility in Mitcham.

**Garden waste and co-mingled recycling** collected from flats (where paper and card is mixed together with other recycling) is taken to a waste transfer station in Mitcham where it is bulked and loaded on to HGVs.

**Mixed container recycling** (plastics, glass, cans and cartons) is taken to a waste transfer station in Coomber Way (Croydon) where it is bulked and loaded on to HGVs.

**Paper and card** is taken a waste transfer station in West Croydon where it's bulked and loaded on to HGVs.

**General waste** (non-recyclable) is taken straight to a state-of-the-art energy recovery facility in Beddington, Sutton. Here, the waste is burnt under strictly controlled conditions.

The Beddington ERF uses **waste** to generate electricity - enough to power +60,000 homes. Metals are separated from the ash using magnets and recycled. The ash itself is recycled into sustainable building products like breeze blocks

The **garden waste** is taken to one of two industrial composting facilities in Hampshire or Essex.

The **garden waste** is turned into high quality compost.

**Co-mingled recycling** is taken to a specialist sorting facility (MRF) in Avonmouth near Bristol.

**Mixed container recycling** (plastics, glass, cans and cartons) is taken to a sorting facility (MRF) in either Rainham or Wolverhampton

The mill turns the used **paper and card** into a wide range of new paper-based products.

**Paper and card** is taken to a specialist paper mill in Kemsley, Kent

At these 'MRFs' (Material Recycling Facilities), the mixed recycling is sorted by machines and by hand and then baled (squashed into cubes) and sold on to re-processors.

**Glass** is melted down and then used to make new glass jars and bottles.

**Tins and cans** are melted down and used to make new metal products.

**Food and drink cartons** are taken to specialist reprocessing facilities where the plastic lining is removed before the carton is recycled into new paper-based products.

Higher quality **plastics** (like bottles) are recycled at a facility in East London. Lower grade plastics (like pots and trays) are recycled at UK facilities whenever possible, but sometimes have to be sent abroad.

Find out more - watch the videos:  
[www.slwp.org.uk/destination-recycling](http://www.slwp.org.uk/destination-recycling)

# THE WASTE JOURNEY - KINGSTON

**The journey starts here:**  
Around 1,000 tonnes of recycling and rubbish is collected from Kingston households every week by a fleet of collection vehicles.

The **food waste** is turned into a liquid bio-fertiliser which is used by UK farmers to help grow their crops. The gasses produced are captured and used to drive a turbine which generates electricity and is fed into the National Grid.

The **food waste** is taken to an anaerobic digestion (AD) plant in Buckinghamshire

The **Beddington ERF** uses **waste** to generate electricity - enough to power -60,000 homes. Metals are separated from the ash using magnets and recycled. The ash itself is recycled into sustainable building products like breeze blocks

All **waste and recycling** is initially taken to the **Villiers Road Waste Transfer Station** in Kingston, where it's bulked and loaded on to HGVs.

**General waste** (non-recyclable) is taken to a state-of-the-art energy recovery facility in **Beddington, Sutton**. Here, the waste is burnt under strictly controlled conditions.

**Paper and card** is taken to a specialist paper mill in **Kemsley, Kent**

The **garden waste** is taken to an industrial composting facility in **Hampshire**.

**Mixed container recycling** (plastics, glass, cans and cartons) is taken to a sorting facility (MRF) in either **Rainham or Wolverhampton**.

The **garden waste** is turned into high quality **compost**.

**Glass** is melted down and then used to make new glass jars and bottles.

**Tins and cans** are melted down and used to make new metal products.

**Food and drink cartons** are taken to specialist reprocessing facilities where the plastic lining is removed before the carton is recycled into new paper-based products.

Higher quality **plastics** (like bottles) are recycled at a facility in **East London**. Lower grade plastics (like pots and trays) are recycled at UK facilities whenever possible, but sometimes have to be sent abroad.

The mill turns the used **paper and card** into a wide range of new paper-based products.

# THE WASTE JOURNEY - MERTON

**The journey starts here:**  
Around 1,250 tonnes of recycling and rubbish is collected from Merton households every week by a fleet of collection vehicles.

The **food waste** is turned into a liquid bio-fertiliser which is used by UK farmers to help grow their crops. The gasses produced are captured and used to drive a turbine which generates electricity and is fed into the National Grid.

**SURREY**  
ANAEROBIC DIGESTION PLANT

The **food waste** is taken to an anaerobic digestion (AD) plant in Surrey

**FOOD WASTE**

**GARDEN WASTE**

**CO-MINGLED RECYCLING**  
(Collected from flats)

**MIXED CONTAINER RECYCLING**

**PAPER & CARD**

**GENERAL WASTE**

**BEDDINGTON ERF**

The Beddington ERF uses **waste** to generate electricity - enough to power ~60,000 homes. Metals are separated from the ash using magnets and recycled. The ash itself is recycled into sustainable building products like breeze blocks

**General waste** (non-recyclable) is taken straight to a state-of-the-art energy recovery facility in Beddington, Sutton. Here, the waste is burnt under strictly controlled conditions.

**Food waste, garden waste and co-mingled recycling** collected from flats (where paper and card is mixed together with other recycling) is taken to a waste transfer station in Mitcham where it is bulked and loaded on to HGVs.

**Mixed container recycling** (plastics, glass, cans and cartons) is taken to a waste transfer station in Morden where it is bulked and loaded on to HGVs.

**Paper and card** is taken a waste transfer station in Morden where it's bulked and loaded on to HGVs.

**HAMPSHIRE COMPOSTING FACILITY**

**ESSEX COMPOSTING FACILITY**

The **garden waste** is taken to one of two industrial composting facilities in Hampshire or Essex.

The **garden waste** is turned into high quality compost.

**MITCHAM WASTE TRANSFER**

**MORDEN WASTE TRANSFER**

**MORDEN WASTE TRANSFER**

**Paper and card** is taken to a specialist paper mill in Kemsley, Kent

**PAPER MILL**

The mill turns the used **paper and card** into a wide range of new paper-based products.

At these 'MRFs' (Material Recycling Facilities), the mixed recycling is sorted by machines and by hand and then bailed (squashed into cubes) and sold on to re-processors.

**Co-mingled recycling** is taken to a specialist sorting facility (MRF) in Avonmouth near Bristol.

**BRISTOL MRF**

**Mixed container recycling** (plastics, glass, cans and cartons) is taken to a sorting facility (MRF) in either Rainham or Wolverhampton

**RAINHAM MRF**

**Glass** is melted down and then used to make new glass jars and bottles.

**Tins and cans** are melted down and used to make new metal products.

**Food and drink cartons** are taken to specialist reprocessing facilities where the plastic lining is removed before the carton is recycled into new paper-based products.

Higher quality **plastics** (like bottles) are recycled at a facility in East London. Lower grade plastics (like pots and trays) are recycled at UK facilities whenever possible, but sometimes have to be sent abroad.

Find out more - watch the videos:  
[www.slwp.org.uk/destination-recycling](http://www.slwp.org.uk/destination-recycling)

# THE WASTE JOURNEY - SUTTON

**The journey starts here:**  
Around 1,200 tonnes of recycling and rubbish is collected from Sutton households every week by a fleet of collection vehicles.

Find out more - watch the videos:  
[www.slwp.org.uk/destination-recycling](http://www.slwp.org.uk/destination-recycling)

# List of re-processors and off-takers

**In 2023/24 the SLWP used more than 175 off-takers and re-processors to treat and process waste and recycling.**

The next two pages provide a list detailing the name and postcode of these facilities. Pages 18 and 19 show a map of the UK and Europe, plotting the location of each of these facilities.
